

Dexian Agri IQ Decision Intelligence System

Smarter Agriculture. Faster Decisions. Measurable Impact.

Dexian Agri Decision Intelligence System empowers agricultural stakeholders, policymakers, field workers, farmers, and agri businesses with real-time insights, AI-driven analytics, and multilingual interface to drive smarter decisions and measurable outcomes.

Unified intelligence for policy makers, governance, field operations, and agri businesses

Supports farmers, and export-oriented crops

Delivers real-time insights, AI-powered analytics and easy to use mobile access.

Multilingual access (English, Hindi, and other regional languages)

Disclaimer

The information displayed in this application demonstration is entirely simulated and does not reflect actual data. It is provided solely to showcase the app's functionality and features. Please note that none of the data represents Government figures or records.

Faster Policy Decisions

Instantly access unified, up-to-date agricultural data to enable decisions to be taken in days not months.

Predictive Readiness

48+ AI/ML models enable early warnings on pest outbreaks, rainfall variance, and yield risks.

Infrastructure Optimization

AI-led logistics intelligence has demonstrated 15–20% savings in cold-chain, and mandi utilization.

Seamless Integration

Seamless API-first integration with systems like AgriStack, eNAM, IMD, and PM-KISAN enables continuous, real-time decision flows across departments.

Market and Price Forecasting

Predict crop yields, market demand, and price fluctuations to stabilize local agricultural markets.

Inclusive Adoption

Multilingual, voice-enabled interfaces encourage adoption among farmers and field officers.

Targeted Farmer Support

Identify vulnerable regions and farmers quickly, enabling timely subsidy distribution and scheme interventions.

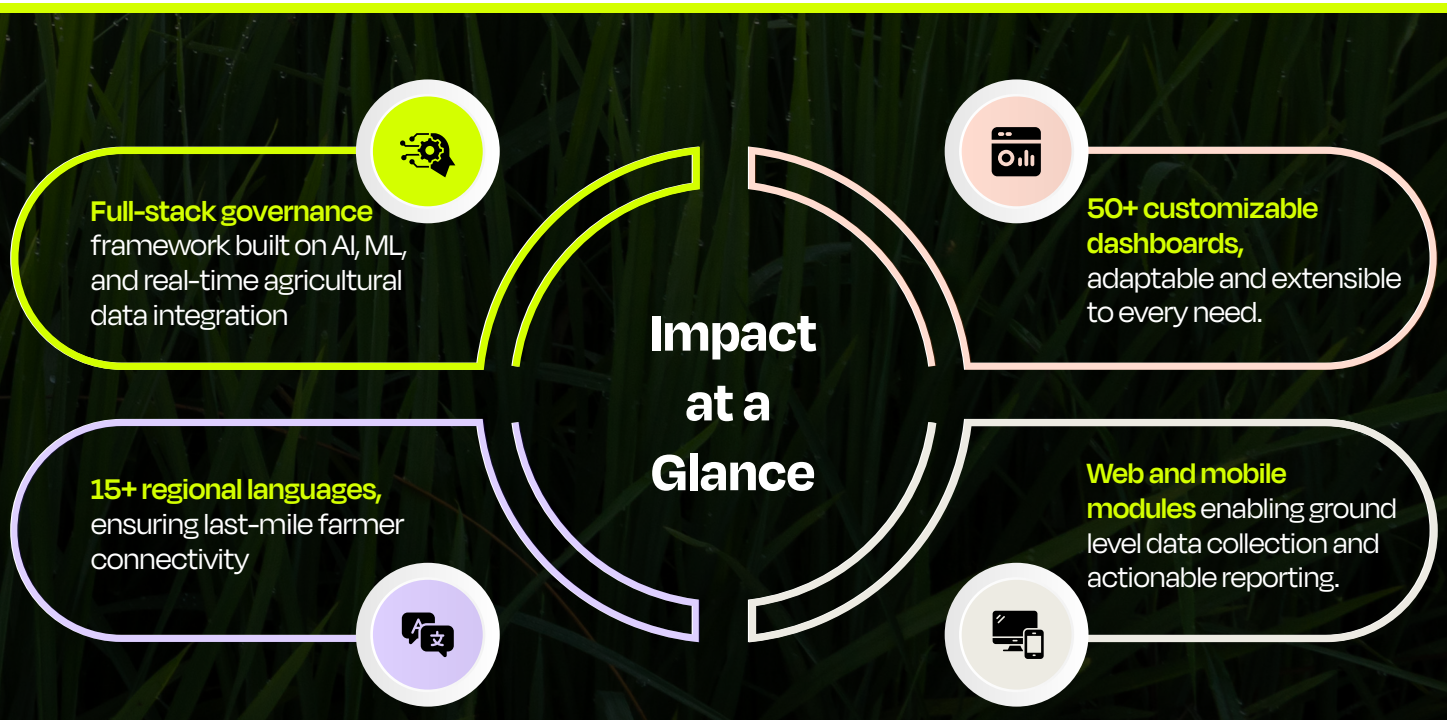

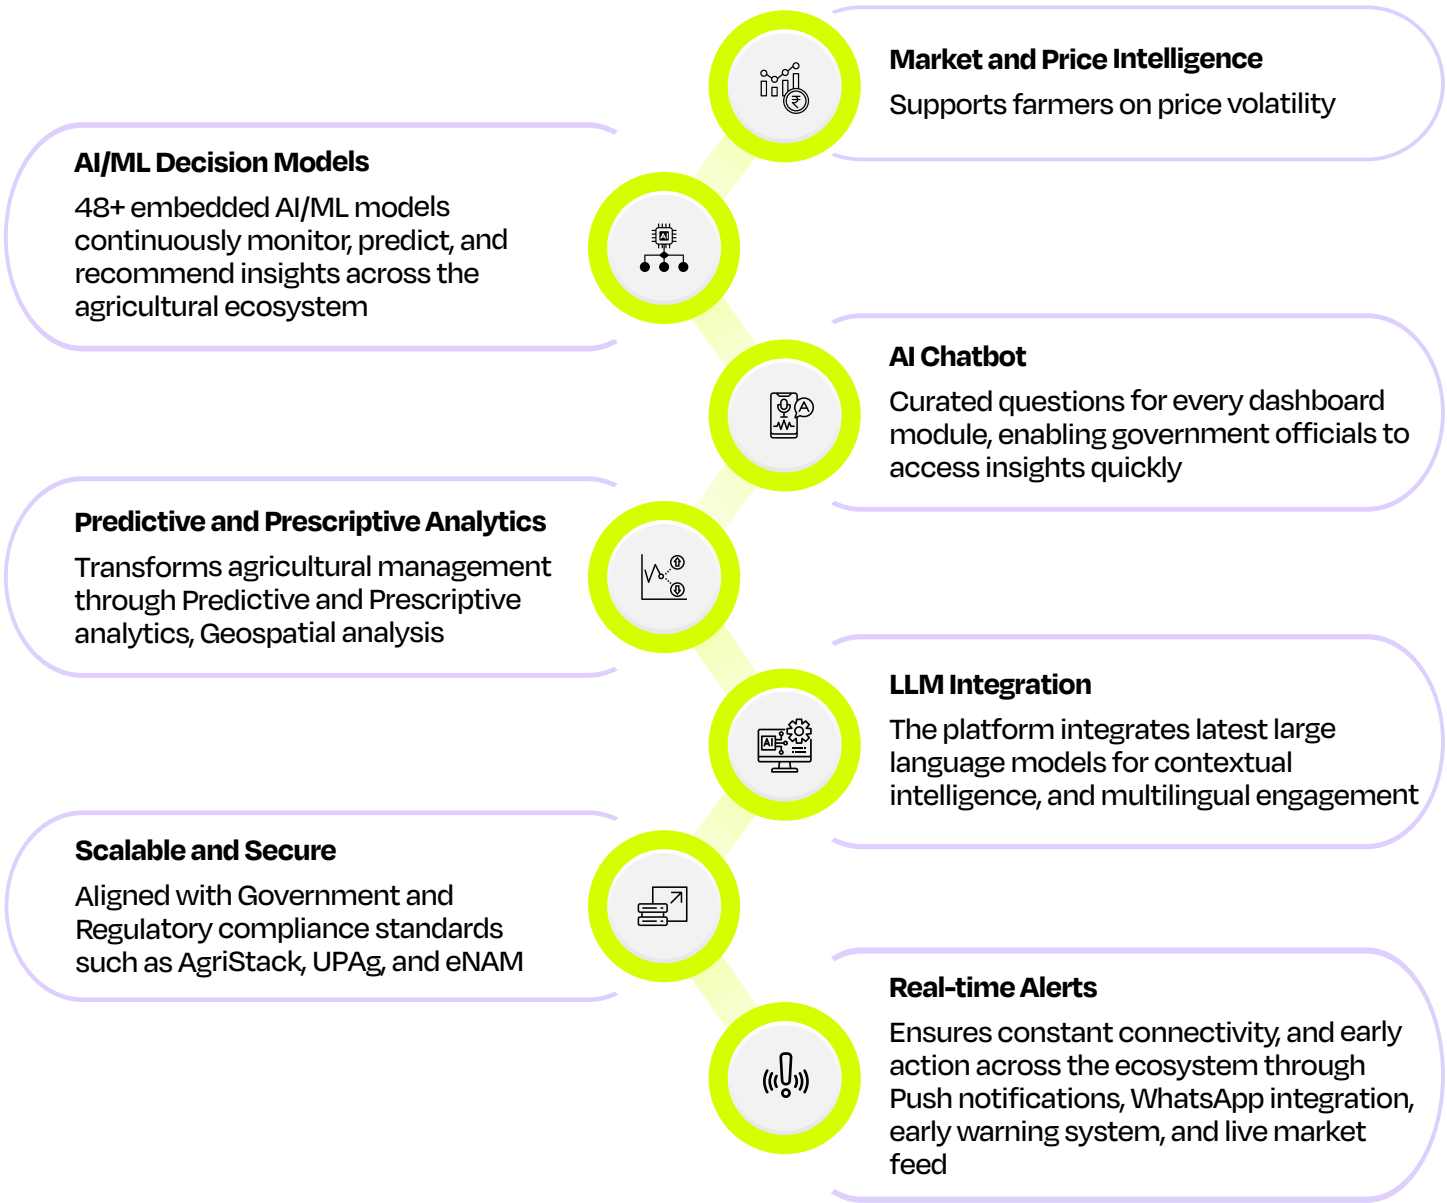

Disaster and Climate Response

Monitor weather, pest outbreaks, and soil conditions to issue early warnings and plan mitigation strategies.

Efficient Resource Allocation

Optimize the use of water, seeds, fertilizers, and funds based on real-time insights.

Agricultural Operations

Crop management, Organic farming, Plant protection, Beneficiary inspection and audit, and Land utilization dashboards

Financial Services

Schemes and subsidy management, Insurance overview, Credit and investment monitoring dashboards and Budget tracking

Market and Commerce

Market arrivals, Market reporting, Commodity history, Market intelligence, and e-NAM Integration dashboards

Livestock and Allied

Livestock population, Livestock rearing, Beekeeping, Fisheries and Poultry dashboards

Infrastructure and Assets

Irrigation asset, CHC assets, Processing unit, Cold storage, and Warehouse dashboards

Capacity Building and Support

Farmers training, Extension services, Knowledge repository, and User metrics dashboards

and
50+ advanced analytics dashboards

Covering weather, Soil health, Pest and Disease supply chain, Farmer Producer Organization (FPO), Contract farming, Agri-input management, Water management, Climate, Smart agriculture and many more.

Mobile App for Field Operations

Collect farmer profiles, land details, crop status, and scheme eligibility on the go

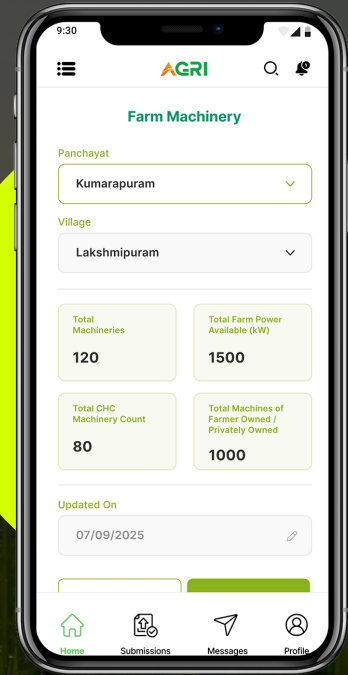

Easy access to real-time data on crops, seeds, Government schemes, and agricultural asset data via mobile app

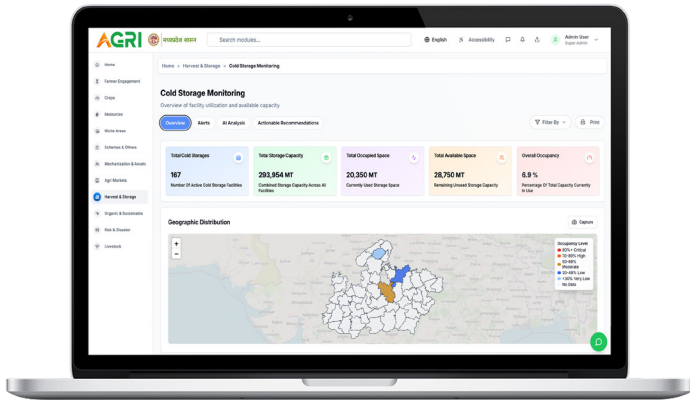

Collect geo-tagged, real-time data in the field

The app can function even offline and with low internet connectivity

Web Platform for Intelligence & Governance

Real-time dashboards with actionable insights

Seamless integration with existing Government platforms

AI-driven analytics for planning, forecasting, and impact measurement

Enables data-backed decisions and proactive governance

Data & Integration

API-first architecture with 70+ external data sources

MDM-based, high-quality, deduplicated, traceable datasets

Fully interoperable with Digital Public Infrastructure

Dexian India – AgriTech Solutions

Global Expertise. Local Innovation.

In the business for **GOOD**.
